ABOUT US

At PF Install Solutions, we have a diversified portfolio of installation and construction capabilities that service the rural and commercial sectors.

Established in 2014, PF Install Solutions has extensive experience working in the commercial sector, providing high quality construction, fencing and concreting services for a range of different enterprises.

Our rural background and experience means we understand our clients' need for stockyards and fencing they can rely on.

Committed to providing a full service, we also offer additional capabilities in concreting, water and plumbing, equestrian fencing, onsite welding and fabrication and maintenance.

Our strength is in our ability to scale. With experience in constructing small, private projects through to million dollar upgrades and expansions, PF Install Solutions can provide you with the large project capability you need and the small business service you want.

OUR PEOPLE

We have a team of more than 50 professionals with expertise in construction, installation, fabrication, welding and project management.

Aaron Purse, Director

Aaron first started in the agricultural industry 20 years ago leaving school at the age of 16 to work on various cattle stations. Over the past two decades, he has gained experience and built strong relationships in the agricultural, construction and infrastructure industries.

Aaron started his first business in 2005, spending two years in mining construction at Nhulunbuy in the Northern Territory. He has also managed contract fencing projects for over 20 private and company owned cattle properties throughout Queensland and New South Wales.

Aaron is passionate about providing clients with high quality project outcomes that are delivered on time and within budget.

Jason Keane, Senior Sales Manager

Jason has been with PF Install Solutions since 2018, with a broad scope ranging from estimating through to getting each job across the line.

In his current role as Senior Sales Manager, Jason is responsible for maintaining client relationships, business development and overseeing the estimating team. He enjoys liaising with clients to establish their requirements and putting together solutions to meet their needs.

Jason has a wealth of experience from over 20 years in the construction industry, progressing to senior leadership positions on large projects. With more than 12 years of experience running his own earth moving business, Jason has a comprehensive appreciation of what a client needs and how to deliver it successfully.

He has undertaken works for the Department of Defence and Gateway Projects. He worked in the resource sector for over eight years, managing large crews on major infrastructure projects for clients such as Origin Energy.

OUR PEOPLE

Dave van Tricht, Operations Manager

Dave van Tricht oversees all projects and project teams as our Operations Manager.

A panel beater by trade, Dave brings a wealth of experience to the team. He ran his own industrial coatings business in Toowoomba for many years and is a NACE Coatings Inspector.

A man of many skills, Dave also has a Certificate IV in Accounting and owned his own Computer/IT business. Dave's role as Project Coordinator sees him manage all of Install Solutions' offsite projects, including fly in, fly out jobs.

As a member of the PF Install Solutions team, Dave is committed to seeing each project through to completion, on time and within budget, and working to grow the company as a whole.

Joel Talbot, Product Development Coordinator

Joel joined the PF Install Solutions team as the Product Development Coordinator after spending 13 years in the Australian Defence Force as a Fitter Armament.

As a maintenance supervisor within the Army, Joel managed a variety of military assets, specialising in armaments with a focus on Computer-Aided Design, 3D Printing and Technical Assessments.

After completing a Graduate Certificate in Project Management, coupled with his Diploma of Engineering, Joel left the Army in search of a new career.

Joel is responsible for the drafting, detail design and development of a range of livestock handling equipment.

OUR SERVICES

Saleyards and Feedlots

PF Install Solutions provides a complete end-to-end solution that maximises stock flow, increases labour efficiency and complies with all safety standards. We work with you to fully customise your facilities and construct high-quality handling facilities that are built to last.

Loading Ramps

Our prefabricated loading ramps are designed specifically for beef operations. We design, fabricate and install under and over double deck loading ramps for operators that move large quantities of cattle each year.

Bunks and Aprons

Our slipform bunks and aprons offer a range of superior benefits to precast concrete bunks for feedlot owners, including minimal long term maintenance, easy cleaning and rust resistant posts.

Commercial Concreting

From sheds to yards, loading areas to working areas, helipads to hangars, concrete plays an integral role in rural and commercial operations. You need fast, precise and reliable concreting and PF Install Solutions has the equipment and know-how to provide it.

Commercial Fencing

Whether you need to secure your warehouse or office, clearly map the boundary of your property, keep intruders and vandals out or ensure your livestock is safe from predators, PF Install Solutions can create a fencing solution that will achieve your desired outcome.

Equestrian Fencing

With horses being the active animals that they are, the right equestrian fencing is crucial to minimise the risks of accidents and injuries and keep your horses secure and out of harm's way. Our high quality equestrian fencing also includes stables, arenas, wash bays and paddock fencing.

Plumbing and Water

PF Install Solutions supplies, fabricates and installs customised polythene and PVC pipelines for large and small scale projects. All works are performed by qualified, ticketed staff managed via QA welding logs.

Maintenance, Repairs, Onsite Welding & Fabrication

To keep your assets in excellent condition, regular maintenance and repairs are essential. We offer a range of maintenance and repair work as well as onsite welding and fabrication to ensure your property is structurally sound and durable.

SALEYARDS

The construction of your stock handling facilities can have a profound effect on your profitability and reputation as a cattle producer and processor.

Understanding the costs and risks involved in selling cattle through a saleyard, we work with you to create high-quality yards that have the safety of patrons and welfare of animals in mind.

Through each yard construction, we consider stock flow, shade and access to water and feed.

Where possible, we structure pedestrian walkways in a way that reduces the amount of human-animal contact. This not only ensures the wellbeing of patrons, but it also reduces the stress on animals.

PF Install Solutions fully customise your facilities, taking into consideration the climate, landscape, breed and age of your livestock, loading and unloading requirements and your desired outcomes to construct high-quality handling facilities that are built to last.

FEEDLOTS

We know that feedlot design can not only impact animal performance and meat quality, but also operational and maintenance costs.

We provide best practice construction and installation to help you create a profitable and efficient feedlot.

PF Install Solutions has the capability to build onsite or prefabricate yard and shade structures depending on your requirements.

With a large crew of tradesmen specialising in stockyards, we can scale projects as required to finish within required timeframes - without jeopardising quality workmanship or blowing budgets.

This is what sets us apart from other yard builders and fabricators.

We ensure everything is thought of - from the necessary induction areas, feed pens and hospital areas to shade structures, well-planned laneway systems, unloading ramps and office facilities.

LOADING RAMPS

We offer prefabricated loading ramps designed for commercial beef operations.

Under and over double deck loading ramps are used by operators that move large quantities of cattle each year.

At PF Install Solutions, we believe good design should assist flow of stock.

Each one of our loading ramps is designed with consideration of the way that the client works their cattle and ensuring the correct receival/loadout yards behind the ramp.

Install Solutions loading ramps have a concrete deck poured in situ which makes for a quieter ramp when in use and improves overall strength.

A new ramp can be installed within 6 to 8 weeks, depending on the design requirements.

BUNKS AND APRONS

Slipform bunks and aprons offer a range of superior benefits to precast concrete bunks for feedlot owners.

Slipform concrete feed bunks are poured and formed onsite at your property.

They are a superior long-term alternative to traditional precast concrete bunks, which are transported to the site in six metre sections and constructed onsite.

At PF Install Solutions, our team can assist you with all your slip form bunk and apron requirements.

Our slipform concrete bunks and aprons offer the following benefits to precast bunks:

- The solid onsite construction means minimal long-term maintenance.
- Easy to clean mechanically, if the correct method is used.
- It is not overly expensive to make a custom mould to suit specific feeding requirements in relation to the overall project cost.
- Rust resistant posts are pushed into the thick wall of the bunk creating a solid long term bunk rail.
- Adjustable cables may be added to the bunk posts.

COMMERCIAL FENCING

Secure your assets with commercial fencing that ticks all the boxes.

Your fence is the only true barrier keeping security risks out. You need the right fencing, wiring and supports to keep your assets safe.

Whether you need to secure your warehouse or office, clearly map the boundary of your property, keep intruders and vandals out or keep your livestock safe from predators, PF Install Solutions can create a fencing solution to meet your needs.

Understanding that there are different fencing requirements for different objectives and security risks, we take the time to make sure you get exactly what you need.

With decades of experience across a wide range of commercial fencing types, we can develop a strategy and design to create the solution you need.

Our commercial fencing capabilities include industrial security fencing, chain wire security fencing, solar farm fencing and rural stock fencing.

Our experienced fencing staff are supported by a comprehensive safety system to ensure that works are carried out with Occupational Health & Safety guidelines.

PF Install Solutions is proudly ISO 9001 accredited.

COMMERCIAL CONCRETING

Concrete is needed for so many different areas on your property: new and existing sheds, stables, hangars, helipads and warehouses.

At PF Install Solutions, we have extensive experience in concreting, laying slabs of all shapes and sizes on both commercial and remote areas for a wide range of purposes. Our concreting services are supported by our specialist equipment.

Our Mack Granite Volumetric Mixer provides the flexibility to manage the production of concrete onsite, and is ideal for concreting trough aprons, feed bunks and steel and concrete posts.

Using our Somero S-485 Laser Screed Machine, we can be precise and efficient with our concreting, laying 350 to 1200 square metres of concrete per day accurately - without the need for a large crew onsite.

PLUMBING & WATER

Our experienced team can supply and install polythene and PVC pipelines for your plumbing and water requirements.

We offer both electrofusion and butt welding services for polythene and PVC pipelines, enabling us to offer the right type of service depending on the job at hand.

We also offer customised fabrication of manifolds and specialise in header feed lines and Turkey nest hook ups.

At PF Install Solutions, we look at the accessibility as well as the pipe size, material and structure to determine the right installation method.

Quality and safety are always our priority and our experienced staff members have the required tickets and qualifications to provide quality outcomes and give you peace of mind.

EQUESTRIAN FENCING

We provide safe, secure and durable equestrian fencing to protect your equine assets.

With horses being the active animals that they are, the right equestrian fencing is crucial to minimise the risks of accidents and injuries and keep your horses secure and out of harm's way.

With decades of experience in designing and constructing fencing for equestrian complexes, and firsthand experience in owning horses, PF Install Solutions can help you determine the right fence, design and materials for your needs.

Our highly experienced team are equipped with the tools and knowledge to build a wide range of equestrian fencing including arenas, round yards, day yards, stables and paddock fencing to the specifications and standards required.

MAINTENANCE, REPAIRS, ONSITE WELDING AND FABRICATION

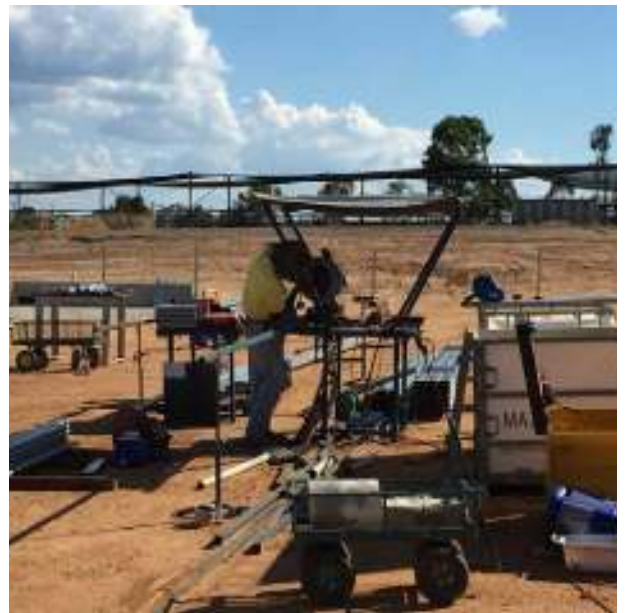

To keep your facility, fencing, yards and equipment in excellent condition, regular maintenance and repair is essential.

At PF Install Solutions, we offer a range of maintenance and repair services as well as onsite welding and fabrication to ensure your facility, fencing, yards and equipment are structurally sound and durable once more.

Our expertise in design, fabrication, installation and repairs, coupled with accurate and reliable equipment, means we deliver the level of precision and dependability you need.

We can provide all of your maintenance, welding and fabrication needs including fencing, gates, sheds, feed bunks, water troughs and loading ramps.

We can also remove and reinstate crushes and head bales and add and extend roofing, fencing and office buildings.

OUR WORK

Inverell RLX Saleyards Upgrade

Supply and installation of:

- 24 Feed pens and bunks
- 24 holding pens
- 312 sale pens and walkways stairs
- 2 processing areas
- Plumbing works for wash down & troughs
- Fire main

Blackall Saleyards Upgrade

- Demolish existing facilities
- Reroute power and associated electrical works including lighting and services
- Plumbing and drainage
- Associated earthworks
- 500+ square meters of concreting (stamped and flat)
- Installation of a new deck lot weighbridge
- Installation of a six-way pneumatic and hydraulic combination draft and scale gates
- Walkways above pens to allow everything to be operated overhead
- New scale house/office facilities
- Cover for work area

OUR WORK

Tintinara Southern Cross Feedlot

Client: Thomas Foods International

Construction of 95 production feed pens and associated laneways including:

- Supply & Install fencing for feedlot pens & laneways
- Supply & Install plumbing for fresh water & sewage lines
- Install 4000L/M of slipform Feed bunks
- Install 12000m² of feed apron
- Install 95 Water trough aprons @ 4750m²

Goonoo Feedlot Upgrade

Client: AACo

Production pens supply and installation:

- Construction of an additional 51 feedlot pens
- Install 3215 L/M slip form bunks
- Install 9445 m² of feed bunk apron
- Install 54 water troughs and all associated plumbing

Design, fabrication and installation of:

- turn key hospital work area including reverse tub, adjustable dual alley race and five way hydraulic draft
- Full refurbishment of existing crush
- Shed supply and install
- Slab, sediment pit and plumbing supply and install

Rangers Valley Feedlot Extension

Client: Rangers Valley

Construction of 110 Feed pens including the supply and installation of:

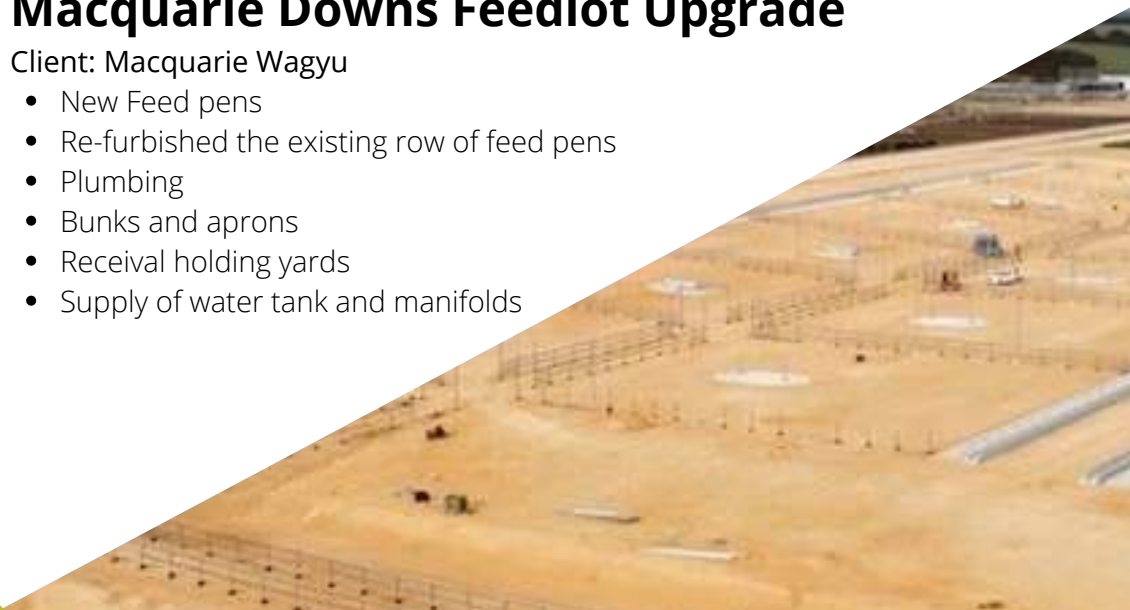

- Water supply line for 110 trough installations
- 110 trough aprons
- 315mm main supply from turkeys' nest to trough header lines

Macquarie Downs Feedlot Upgrade

Client: Macquarie Wagyu

- New Feed pens
- Re-furbished the existing row of feed pens
- Plumbing
- Bunks and aprons
- Receival holding yards
- Supply of water tank and manifolds
